

domino  
LA FIORIERA componibile

## Why choose Domino?

Domino is a **modular and customizable planter system, Made in Italy**. It allows for the creation of large planters without shape limitations, thanks to its **open-cell design**. Perfect for both terraces and ground-level spaces, Domino planters are available in a variety of premium materials, including **Polypropylene, Metal, Porcelain Stoneware, and Reconstructed Stone**.

## The Advantages of Domino Planters

### Open-cell design

#### Optimal root growth

The **absence of dividing walls** within the planter allows **root systems to develop freely and naturally**. This eliminates the need to repot plants and makes Domino ideal for accommodating large plants, even in smaller spaces.

### Modular and configurable

#### Adaptable to any design

Domino Planters are highly adaptable and can be configured **without limitations**. With varying heights and lengths, they allow for the creation of striking layouts that add **depth and dynamism** to any space.

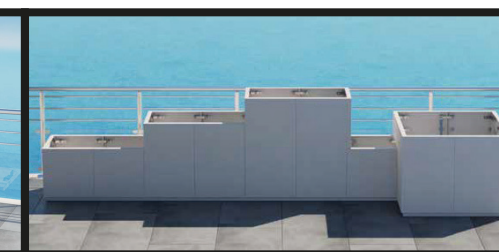

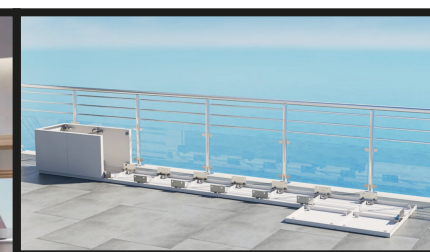

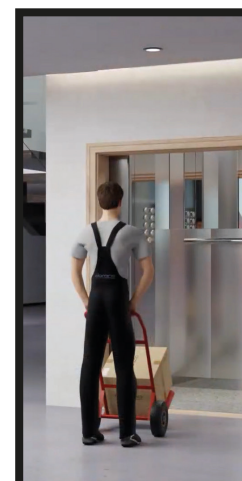

### Customizable and exclusive

#### Perfect integration

With a wide range of **elegant finishes and premium materials** to choose from, you can create your own personalized green space **without design limitations**.

## Domino® patented mounting system

Domino Planters come in practical, lightweight packaging that is easy to handle. Assembly takes place directly on-site and is made simple with **clear, intuitive instructions**.

The perfect blend of convenience, functionality, and quality.

# Materials and finishes

## Polypropylene

Lightweight and durable

Our **polypropylene** planters are crafted from specially designed slabs that **resist weathering and damage from UV rays**. This advanced polypropylene material ensures exceptional durability and long-lasting performance, even in harsh outdoor conditions. The blend of unique design and high-quality materials makes these planters the perfect choice for adding both **style and resilience** to your space.

**POLYPROPYLENE SKYLINE:** This **evolution of the Domino modular system** allows for planters with **varying heights and depths**, while maintaining the **open-cell design**. The result is dynamic, three-dimensional visual effects.

### Technical specifications

Minimum depth 29 cm  
Customizable lengths in multiples of 25 cm  
Available heights 55, 80, and 105 cm  
(Finished measurements)

## Metal

Personalized and exclusive

Metal planters embody sophistication and modern **minimalism** with a subtle **industrial** flair. The durability and strength of metal offer significant advantages, making these planters a **reliable and long-lasting choice**. The slabs are electro-galvanized, powder-coated, and oven-baked, ensuring resistance and durability. They come **insulated** with a 30mm polystyrene panel, which effectively **eliminates the transmission of solar heat**. Additionally, these planters feature a lifetime-guaranteed, wear-resistant polypropylene base that **prevents deterioration** from water contact.

**METAL + POLYPROPYLENE:** For planters with non-visible sides (such as those placed against a wall or railing), polypropylene slabs can be used to **lighten the structure and reduce costs**.  
**METAL SKYLINE:** This **evolution of the Domino modular system** allows for planters with **varying heights and depths**, while maintaining the **open-cell design**. The result is dynamic, three-dimensional visual effects.  
**ONDADOMINO:** OndaDomino is the **innovative**, exclusive, and patented line of the Domino modular system in metal. With its distinctive open-cell structure, it is designed to offer elegant and versatile solutions. Available in metal in three lengths – 50, 100, and 150 cm – and two heights – 50 and 75 cm – OndaDomino lets you create planters with a fluid design and **sinuous lines** that blend perfectly into any space..

### Technical specifications

Minimum depth 29 cm  
Customizable lengths in multiples of 25 cm  
Available heights 55, 80, and 105 cm  
(Finished measurements)

# Porcelain Stoneware

Refined and sophisticated

Compact and elegant, Porcelain Stoneware always makes an impression. With **exceptional technical performance**, it is highly durable, water-repellent, and hygienic. The elegance of Stoneware planters shines through in every detail, adding a touch of **class** and **sophistication** to any environment.

The smooth, polished surface and **natural shine** of the planters give them a sophisticated and appealing look, enhancing the aesthetics of any space. Stoneware planters blend seamlessly with surrounding greenery, creating a harmonious connection between nature and design.

## Technical specifications

Minimum depth 32 or 47 cm  
Customizable lengths in multiples of 30 or 45 cm  
Available heights 62 and 92 cm  
(Finished measurements)

Do you require specific dimensions?  
Porcelain slabs can be customized to the centimetre, ensuring a perfect fit for your needs.

# Reconstructed Stone

Stable and robust

Reconstructed Stone planters offer timeless elegance and **natural** appeal for outdoor spaces. Their **robust** and **heavy** construction provides superior stability, making them resistant to physical impact and weather. Choosing a Reconstructed Stone planter is a commitment to **beauty, functionality and sustainability**.

**NEWLIGHT SOLUTION:** Our **Newlight** line seamlessly blends the beauty of **Reconstructed Stone** with the lightweight benefits of **Polypropylene**. The planters feature a polypropylene backing and base, significantly reducing weight, while the slabs used for the visible front are crafted from Reconstructed Stone.

## Technical specifications

**Slab size 50x50 cm**  
Minimum depth 29 cm  
Customizable length in multiples of 25 cm  
Available height 55 cm  
(Finished measurements)

**Slab size 40x60 cm**  
Minimum depth 44 cm  
Customizable length in multiples of 40 cm  
Available height 65 cm  
(Finished measurements)

# Furnishings

Furnishings perfectly integrate into the structure of the planters, adding a **touch of style** and design, enhancing **comfort**, and creating **welcoming environments**.

### Benches

Benches offer a functional solution for those who wish to experience Domino planters not just as decorative elements, but as practical pieces. Made from **metal** or **WPC**, these modular structures can be placed between or on top of planters and can include a storage compartment for various items. To enhance comfort and functionality, custom modular **cushions** can also be added. Domino Benches are available in **100 cm** and **150 cm** sizes.

### Practical and comfortable

### PergoDomino

#### Anchoring planter

With PergoDomino, the planter is affixed to the pergola, acting as an anchor and providing stability. This innovative design serves as a **counterweight**, keeping the **pergola** secure without the need to drill into or directly anchor it to the ground. Beyond its structural role, PergoDomino enhances **visual appeal** by housing plants and flowers, adding greenery and colour to the pergola and its surroundings. It also provides a sturdy, resistant base that prevents movement while preserving the waterproofing and integrity of the surface beneath.

### Stability and style

### Panels

Panels are decorative elements integrated into the planters, designed to provide **privacy**, **shield** from sun and wind, and enhance the **aesthetics of the space**. The standard height is 190 cm, with **customizable** lengths to fit the planter size. They can be installed within the planter structure, either at the back against the wall or centrally, transforming the composition into a partition element.

### Privacy and personality

**Privacy Panels**, crafted from galvanized or stainless steel, are produced using advanced laser technology and feature fully customizable designs to suit your aesthetic preferences.

**Sunshades**, made from WPC slats—a durable, weather-resistant material—offer effective protection from heat and UV rays.

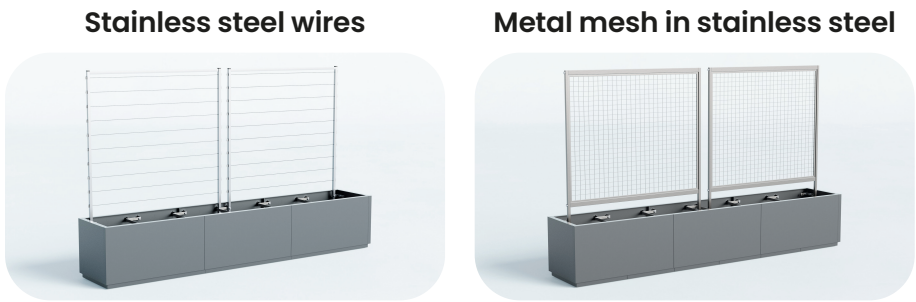

**Glass Supports**, consist of stainless steel frames specially designed to make laminated glass easy to install.

### Trellises

These are **metal structures** made from stainless steel tubing, offering a strong and versatile framework for plants to climb and grow in an orderly fashion. The standard height is 190 cm, with the length **customizable** to suit the size of the planter. The Grids can be positioned centrally within the composition to serve as a partition element, or placed at the back against the wall of the planter.

### Strength and support

# Accessories

Accessories **enhance the functionality** of Domino Planters, **creating a distinctive atmosphere** and adding dynamism through a range of diverse options.

## Domino Lights

Domino Lights allow you to create the perfect **atmosphere** for any occasion. They offer various lighting solutions for planters, plants, and flowers, transforming the overall ambiance. The **light** emitted by Domino Lights adds a magical and relaxing touch to your outdoor space.

### Illumination and ambiance

Recessed Light

## Wheel base

Wheel bases allow for easy **movement** of planters. Made from galvanized and painted metal, they are available in various colours. The wheel base **model with cover** combines practicality and aesthetics, enabling effortless movement of the planters while keeping the wheels hidden. Available for maximum planter dimensions up to 200 cm, they can be customized to size.

### Mobility and versatility

Frame with fixed non-swivel support wheels

Wheel base with cover

# Filling and Drainage

Proper **drainage** is essential for plant health because it prevents the accumulation of excess water, which can lead to root deterioration. Without adequate drainage, plant roots can suffocate due to a lack of oxygen, compromising their ability to absorb vital nutrients.

**Correct filling** of the planter is equally important. A well-aerated substrate rich in nutrients allows roots to expand freely and access the water and nutrients necessary for growth.

**STEP 1: THE EXPANDED CLAY**  
Begin by placing 7 to 10 cm of **expanded clay or gravel** at the bottom of the planter. This will **retain** water and **release** it to the roots as needed.

**STEP 2: THE GEOTEXTILE**  
Next, cover the planters (including the walls) with the **geotextile** fabric, placing it over the clay layer to ensure that both the bottom and sides of the planter are fully covered. The geotextile fabric will allow **excess water**, which cannot be retained by the topsoil and drains downward, to escape cleanly from the joints of the base.

**STEP 3: THE POTTING SOIL**  
Lastly, fill the planter with a growing medium, preferably **potting soil** lightened with pumice stone or a similar material without compost.
